

# Entry Level Python Programmer Looking to Manage Code

Brett Paufler  
[www.paufler.net](http://www.paufler.net)

-----

I know Python. No, I don't contribute to the core. But for the job I'm applying, I take my competition to be someone with a Bachelors Degree in Computer Science. And I will stack my knowledge of Python up against theirs any day of the week. At this point, for me, understanding Python means delving into the underlying C, utilizing yet another third party library, and working my way through random bits of code. The rabbit hole that is computer programming goes on forever. And I crash against the limits of my knowledge on a daily basis. But let us not be humble, I am smarter than the average bear. Besides, this is what that preliminary phone call and white board exercises are all about. Try me. I can code.

In other news, I've written countless novels. I study economics for fun, the odd bit of math to challenge my mind, and find the opinions of the Supreme Court to be highly illuminating as to the nature of the social contract, while classical art has turned out to be a whole other rabbit hole that I like going down. But perhaps more importantly, I manage my own website, so I know how to curate content. And if in any way, I have piqued your interest, please feel free to browse [www.paufler.net](http://www.paufler.net) and prepare to be amazed (or just pleasantly amused) at how one human has chosen to spend the last few years of their life. With any luck (and/or if you have an interesting challenge to offer), I will be spending the next few years working with you.
